## BURMESE

## BUR

## STANDARD

<b>General</b>	Appearance	The Burmese distinguishes itself as an independent breed by its unique genetics of colour (c <sup>b</sup> c <sup>b</sup> ). Striking characteristics of this lively breed are its silky coat texture as well as their expressive eyes. It is a medium-sized, elegant cat. Any suggestion of either Siamese type or the cobbliness of the British must be regarded as a fault.
	Size	medium
<b>Head</b>	Shape	viewed from the front: short wedge, wide at the cheekbones, tapering to a blunt finish at the muzzle. Top of the head broad and with height, wide between the ears and slightly rounded. In profile: brow slightly rounded; tip of the nose and chin form a vertical line.
	Nose	distinct nose break at the base
	Jaws	wide at the hinge
	Chin	strong; in profile the chin shows a strong lower jaw
<b>Ears</b>	Shape	medium in size (exception: kitten), broad at the base with slightly rounded tips
	Placement	set well apart; the outer line of the ears continues the upper part of the face (exception: mature males - fullness of cheeks). In profile the ears have a slight forward tilt.
<b>Eyes</b>	Shape	large and set wide apart; the top line of the eyes is straight with a slight oriental slant towards the nose, the lower line being rounded
	Colour	Lustrous, particularly alert and bright. All shades of yellow from chartreuse to amber; golden yellow is preferred. Shape, size and set are more important for the expression of the Burmese than the colour. Allowances should be made for colour dilution in older cats.
<b>Body</b>	Size	of medium length
	Structure	muscular and compact, heavier than its appearance indicates. Chest strong and rounded in profile, back straight.
<b>Legs</b>		rather slender and in proportion to the body
	Paws	oval, small, in proportion to the body
<b>Tail</b>		of medium length, straight; medium thickness at the base, tapering to a rounded tip
<b>Coat</b>	Structure	fine, glossy, silky, lying close to the body, almost without undercoat, very short
	Colour	In all colour varieties the underparts of the body are paler than back and legs, but shading should be gradual. Hair should shade gradually to a paler colour at the roots. Face and ears may show a little contrast. All varieties without any bars or spotting. For colour varieties refer to tables below.

<b>Remarks</b>		In kittens (3-6 months) allowance should be made for faint ghostmarkings and an overall paler body colour than in adults
<b>Faults</b>	Eyes	oriental eye shape round eyes
	Head	jaw pinch prominent nose bump
<b>Faults precluding the certificate</b>	Type	oriental or British type
	Eyes	more blue than yellow pigmentation
	Coat	too many white hairs distinct barring and ghostmarkings
